AGRI ASSIST AI

Hello! I'm your AI crop advisor. Ask me anything about your crops, soil, weather, or pests.

You

Why are the leaves on my tomato plants curling and turning yellow?

YOU

AI

AGRI ASSIST AI

AI RESPONSE: Yellowing and curling leaves may indicate overwatering, nitrogen deficiency, or early blight infection. Check soil moisture levels first and inspect for fungal spots...

RECOMMENDED ACTIONS:

1. Test soil moisture

2. Apply balanced fertilizer

3. Inspect for fungal spots

QUERY METADATA

Date: June 16, 2026

Crop: Tomatoes

Category: Disease / Pest

QUERY TITLE:

Why are my tomato leaves curling and turning yellow?

YOU

YOUR QUESTION:

USER QUESTION TEXT: I noticed the leaves on my tomato plants started curling upward and turning yellow at the edges about 3 days ago. Soil looks moist. Location: Punjab. Season: Pre-monsoon.

AI

AI RESPONSE:

Confidence:

87%

AI RESPONSE BODY: Based on symptoms – upward leaf curl, yellowing at edges, high soil moisture – this is likely overwatering combined with early Fusarium wilt. Pre-monsoon humidity accelerates fungal spread. Recommend reducing watering frequency and applying copper-based fungicide...

AI RESPONSE CONTINUED: Monitor for 48 hours. If symptoms persist or spread to stems, consider uprooting affected plants to prevent cross-contamination.

SECTION: Recommended Actions

1

✓

1. Reduce irrigation frequency – allow topsoil to dry between watering cycles

2

2. Apply copper-based fungicide (Bordeaux mixture) to affected plants

✓

3

3. Improve airspace – prune lower foliage, ensure 30cm gaps between plants

✓

4

4. Monitor for 48 hours and re-consult if spread continues to stems
